SUMMARY

Senior Android engineer with 10+ years in software engineering, spanning native mobile, backend systems, and startup ownership. At Lyft, led the Android client for Driver AI, built shared voice infrastructure, and strengthened Android Auto reliability. Previously co-founded Verdict MMA, serving 100K+ users, and owned six Android apps at FantasyPros. Experienced in Kotlin, Jetpack Compose, Android payments, and prediction and sports apps, with delivery across client and backend teams.

EXPERIENCE

LYFT | Senior Software Engineer, Android

Toronto | January 2024 - Present

- Led Android development of **Driver AI**, an AI earnings assistant, from specification to public launch; built the chat and voice client, negotiated shared API contracts, and added driving-aware input controls.
- Productionized an internal multi-agent pipeline that turns Slack/Jira requests into draft iOS and Android PRs; added queued workers, authenticated webhooks, and human approval gates, then packaged it for organization-wide use.
- Built a speech framework reused across three products; led Android delivery of navigation voice choices, with staged rollout targeting roughly 750K eligible drivers.
- Isolated an Android Auto release regression to Android 16 through physical head-unit testing, enabling service recovery for unaffected drivers and verifying a targeted fix within roughly three days.

VERDICT MMA | Co-Founder & Tech Lead

Remote | June 2021 - December 2023

- Co-founded a seed-funded MMA prediction and social platform serving 100K+ users; owned features across native Android, web, and backend systems.
- Enabled native profile, balance, deposit, and withdrawal experiences with Kotlin/RxJava and backend-for-frontend APIs; handled payment-provider callbacks and pending states in Android flows.
- Moved notification fan-out into Redis-backed queues with bounded processing and bulk enqueueing; optimized leaderboard reads with composite SQL indexes while preserving older Android client compatibility.
- Corrected refund handling so declined full-balance withdrawals could restore the original balance; added callback regression tests and automated admin create/update coverage.

FANTASYPROS | Android Engineer → Senior Android Engineer

Remote | January 2018 - June 2021

- Owned six Android apps, including My Playbook, Draft Wizard, BettingPros, and Fantasy News; improved the average Play Store rating from 4.1 to 4.6.
- Modernized Java code with Kotlin, Coroutines, Flow, and ViewModel; adopted Jetpack Compose and reduced build times by 35%.
- Built CI/CD with automated unit and UI tests and secure release signing; developed white-label Android tooling for ESPN, Yahoo, The Athletic, and the NBA.

COX AUTOMOTIVE | Software Engineer

Toronto | May 2016 - August 2017

- Built web portals for dealership clients (Mazda, Volvo, Hyundai, Porsche) to create and manage vehicle financing applications.
- Designed a daily ETL pipeline aggregating every lease and loan offer in Canada, and hardened the platform with query sanitization to eliminate SQL injection exposure on sensitive financial data.

SKILLS

Android: Kotlin, Java, Jetpack Compose, Coroutines & Flow, ViewModel, RxJava, Android Auto, Gradle, Maestro
Backend / AI: TypeScript, Node.js, SQL, Redis, REST APIs, LLM integration, LangGraph, Python
Quality: Mobile performance, crash analysis, automated testing, CI/CD, Firebase, Sentry, release signing

EDUCATION

TORONTO METROPOLITAN UNIVERSITY | B.Sc. Computer Science

Toronto | 2014
